                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: Modulates cytoplasmic dynein binding to an organelle, and plays a role in prometaphase chromosome alignment and spind organization during mitosis. May play a role in synapse formati during brain development.

SUBUNIT: Subunit of dynactin, a multiprotein complex associated in the state of the synapse of the subunit of dynactin, a multiprotein complex associated in the synapse of the s

FUNCTION: Modulates Cytoplasmic dynein binding to an organelle, FUNCTION: Modulates Cytoplasmic dynein binding to an organelle, and plays a role in prometaphase chromosome alignment and spindle organization during mitosis. May play a role in synapse formation during brain development.

SUBCHIT: Subunit of dynactin, a multiprotein complex associated with dynein (By similarity). Interacts with BICD2.

SUBCELIULAR LOCATION: Cytoplasmic and membrane-associated.

DEVELOPMENTAL STAGE: Present thigh levels in both cytoplasmic between the played the membrane-associated.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      associated form are greatly reduced in the adult.

New tumor-associated antigenic target polypeptides and nucleic acids, useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian or prostate cancer or tumor.

Claim 12; SEQ ID NO 3675; 7273pp; English.

The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and

밁 á

```
cc polypeptides; expression vectors and host cells comprising a TAT nucleic cacid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or chapmosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in the chromosome identification and in gene therapy. The present sequence

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 This sequence represents a novel isolated human structural and cytoskeleton-associated protein (SCAP) polypeptide. The polypeptides and polymucleotides encoding them are useful in diagnosing, treating and cypopuruleotides encoding them are useful in diagnosing, treating and preventing diseases or conditions associated with the decreased cypopuruleotide or over expression of SCAP, such as cell proliferative (e.g. cancer, atherosclerosis), neurological (e.g. epilepsy, Huntington's cypopuruleotide, heart (e.g. hypertension, heart failure, anginal and cypopuruleotide and associated with the expression of nucleic acid and amino acid sequences of scapenums on the expression of nucleic acid and amino acid sequences of SCAP. The SCAP or its fragments are useful in screening compounds for confictiveness as agonist or antagonist of the polypeptides, or in caltering the expression of the target polymucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring or measuring protein-protein profiles
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalogathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, anticonvulsant, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyrold, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders; and inflammatory, angiogenic and immunologic disorders. The present sequence represents human p50 which is given in the exemplification of the present
Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention
                                                                                                            New human breast and ovarian cancer associated gene sequences and the polypeptides encoded by these genes, useful in the prevention, treatm and diagnosis of cancer, immune disorders, cardiovascular disorders an neurological diseases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; breast cancer; ovarian cancer; cytostatic; immunosuppressive; nootropic; neurpprotective; antiviral; antiallergic; hepatotropic; antidiabetic; antiinflammatory; antiulcer; vulnerary; anticonvulsant; antibacterial; antifungal; antiparasitic; cardiant; immune disorder; addison's disease; allergy; autoimmune haemolytic anaemia; autoimmune thyroiditis; diabetes mellitus; Crohn's disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence 406

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cc sequences AAF22032 - AAF22040 and AAB59129 which are used in the ci solation and characterisation of the DNA and protein sequences of the ci nvention. The breast and ovarian cancer associated DNA, protein, agonist cor antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antivital; antiallergic; hepacotropic; antidabetic; antifungal; antiparasitic and cardiant activity. The polynucleotide and protein sequences are used in the diagnosis of cancer, particularly cortein sequences are used in the diagnosis of cancer, particularly cortein sequences are used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune corteins agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune corteins, autoimmune thyroiditis, diabetes mellitus, Crohn's consense, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular disorders such as myocardial ischaemias; wound healing; neurological diseases such as cerebral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer-associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat disorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting callular proliferation, such as benign or mallignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, and inflammatory, angiogenic and immunologic disorders. The present sequence represents a specifically claimed peptide inhibitor of cellular proliferation from the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               29-SEP-1999;

The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, therefore the property of the present colorectal, prostate, pancreatic, lung, vulval, therefore the present and provide the present colorectal and provide the provide the provide the provide the provided that the provided t

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders; and inflammatory, angiogenic and immunologic disorders. The present sequence represents a peptide that can be N-terminally added to (P1)
The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          p50 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; sarcoma; glioblatoma; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; satrocytal disorder; pypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; anglogenic disorder;
                                                                                                                                                                                                                                                Claim 1; Page 29;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ន្តន្តន្ត
     The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC apptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and ceck tumours); leukaemias and lymphoid malignancies, other disorders such CC as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, epithelial, stromal and blastocoelic disorders; and crimmatory, angiogenic and immunologic disorders. The present sequence or carries and peptide that can be N-terminally added to (P1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   p50 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; sarcoma; glioblatoma; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; astrocytal disorder; hypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; angiogenic disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 inflammatory, angiogenic and immunologic disorders. The present represents a peptide that can be N-terminally added to (P1)
                                                                                                                                                                                                                                                                                              Claim 1; Page
                                                                                                                                                                                                                                                                                                                               New peptide inhibitors of p50/dynamitin useful for treating cancer inhibiting cellular proliferation, e.g. benign or malignant tumors, leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               21-JAN-2002; 2002WO-US001708

The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABPE2966 and ABPE2967 and can have C-terminal and N-terminal extensions. (I) have cycostatic and antiinflammatory activities and can be used as 950/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, inflammatory, angiogenic and immunologic disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        p50 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; sarcoma; glioblatoma; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; astrocytal disorder; pypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; anglogenic disorder;

                                              The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the Sequences given in ABP52966 and ABP52967 and can have C-terminal and N-CC terminal extensions. (I) have cytostatic and antiinflammatory activities CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such CC as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such CC macrophagal, astrocytal, hypothalamic and other glandular, CC inflammatory, angiogenic and immunologic disorders. The present sequence crepresents a peptide that can be N-terminally added to (P1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    S

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Ś
                                                                                               The present invention describes an isolated peptide (I) comprising or Chaving at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the Sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and blastocoelic disorders; and cinflammatory, angiogenic and immunologic disorders. The present sequence represents a peptide that can be N-terminally added to (P1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Matches

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ş
                          The present invention describes an isolated peptide (I) comprising or CC having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the CC sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The CC peptides, nucleic acid molecules and methods from the present invention CC are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, CC gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, CC thyroid, hepatic carcinomas, sarcomas, glioblatcomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, CC macrophagal, epithelial, stromal and blastocoelic disorders; and crepresents a peptide that can be N-terminally added to (P1)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Cellular proliferation inhibition; cytostatic; antiinflammatory; cancer; p50 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; sarcoma; glioblatoma; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; astrocytal disorder; hypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; angiogenic disorder;
                                                                                                                                                                                                                                                                                                                                            New peptide inhibitors of p50/dynamitin useful for treating cancer inhibiting cellular proliferation, e.g. benign or malignant tumors, leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders.

AAH32943 to AAH37195 and AAG73514 to AAG77788 represent human colon cancer associated nucleic acid molecules (N) and proteins (P), where the proteins are collectively known as colon cancer antigens. The colon cancer antigens have cytostatic activity and can be used in gene therapy and vaccine production. N and P may be used in the prevention, diagnosis and treatment of diseases associated with inappropriate P expression. For example, N and P may be used to treat discorders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expressing inactive proteins or to supplement the patients own production of P. Additionally, N may be used to produce the colon cancer associated Ps, by inserting the nucleic acids into a host cell and culturing the cell to express the proteins. N and P

Nucleic acids encoding 4277 human colon cancer-associated polypeptides, useful for preventing, diagnosing and/or treating colorectal cancers.

                        mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Tumour-associated antigenic target; TAT; human; overexpression; citumour; diagnosis; cell proliferative disorder; breast cancer; colorectal cancer; lung cancer; ovarian cancer; liver cancer; central nervous system cancer; bladder cancer; pancreatic cancer; cervical cancer; melanoma; leukaemia; hybridisation probe;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         can be used in the prevention, diagnosis and treatment of colorectal carcinomas and cancers. AAH37196 to AAH37204 and AAB77789 represent sequences used in the exemplification of the present invention. N.B. Pages 666 to 682 and page 7053 of the sequence listing were missing at time of publication, meaning no sequences are present for SEQ ID NO:1027 to 1052, 7921 and 7922
                                                                                                                                                                                                                                                                                              The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New tumor-associated antigenic target polypeptides and nucleic acids, useful in preparing a medicament for treating or detecting a proliferative disorder, e.g. breast, lung, colorectal, ovarian or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          02-OCT-2002;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             29-SEP-2003; 2003WO-US028547.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   15-APR-2004

These are also useful in assessing the effects of exogenous compounds on the expression of nucleic acid and amino acid sequences of SCAP. The SCAP or its fragments are useful in screening compounds for effectiveness as agonist or antagonist of the polypeptides, or in altering the expression of the target polynucleotide and compounds that specifically bind to or modulate the activity of the polypeptide. The microarray is useful in monitoring or measuring protein-protein interactions described the polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Leber's hereditary optic neuropathy; LHON; mitochondrial encephalopathy lactic acidosis and stroke; MELAS; myoclonic epilepsy ragged red fibre syndrome; MERRF; cancer; neuroprotective; nootropic; antidiabetic; anticonvulsant; antiarthritic; osteopathic; ophthalmological; cytostatic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                mitochondrial; human;

This invention relates to novel for therapeutic intervention in altered mitochondrial function.

mitochondrial targets that can be used treating a disease associated with specifically, it refers to a method fo

a method for

The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (PI) or (P2). Where (PI) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast,

The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antidiabetic, antiarthritic, osteopathic, ophthalmological and cytostatic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          WPI; 2002-657599/70.
                                                                                                                                                                                                                                                                                                                               New peptide inhibitors of p50/dynamitin useful for treating cancer linhibiting cellular proliferation, e.g. benign or malignant tumors, leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sharp DJ, Rogers GC,

                        Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB58711 - AAB59128. The DNA and protein sequences are associated with breast and ovarian cancer. Included in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; nootropic; neuroprotective; antiviral; antiallergic; hepatotropic; antidiabetic; noticinglammatory; antivicer; vulnerary, anticonvulsant; antibacterial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such as neuronal, glial, astrocytal, hypothalamic and other glandular, macrophagal, epithelial, stromal and bhastocoelic disorders; and inflammatory, angiogenic and immunologic disorders. The present sequence represents human p50 which is given in the exemplification of the present

New peptide inhibitors of p50/dynamitin useful for treating cancer inhibiting cellular proliferation, e.g. benign or malignant tumors, leukemia and lymphoid malignancies, or inflammatory, angiogenic and immunologic disorders. γd

Fig 55pp; English.

The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antiinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, gastric, ovarian, colorectal, prostate, pancreatic, lung, vulval, thyroid, hepatic carcinomas, sarcomas, glioblatomas, and various head and neck tumours); leukaemias and lymphoid malignancies, other disorders such

antifungal; antiparasitic

and cardiant

The present invention describes an isolated peptide (I) comprising or having at least 90% identity to (P1) or (P2). Where (P1) and (P2) are the sequences given in ABP52966 and ABP52967 and can have C-terminal and N-terminal extensions. (I) have cytostatic and antinflammatory activities and can be used as p50/dynamitin inhibitors and in gene therapy. The peptides, nucleic acid molecules and methods from the present invention are useful for treating cancer by inhibiting cellular proliferation, such as benign or malignant tumours (renal, liver, kidney, bladder, breast, such as benign or malignant tumours (renal, liver, kidney, bladder, breast,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Cellular proliferation inhibition; cytostatic; antiinflammatory; cancer; ps0 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; ps1 inhibitor; dynamitin inhibitor; gene therapy; tumour; carcinoma; ps2 inhibitoma; leukaemia; lymphoid malignancy; neuronal disorder; glial disorder; astrocytal disorder; hypothalamic disorder; inflammatory; glandular disorder; macrophagal disorder; epithelial disorder; stromal disorder; blastocoelic disorder; angiogenic disorder;
                                                                                                                                                              New peptide inhibitors of p50/dynamitin useful for thinhibiting cellular proliferation, e.g. benign or malleukemia and lymphoid malignancies, or inflammatory, immunologic disorders.
                                                                                                                                                                                                                                                                                                                               14-FEB-2001; 2001US-00782816
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Synthetic
